ROLE OF STAKEHOLDERS IN DELIVERING QUALITY MANAGEMENT EDUCATION FOR SUSTAINABLE DEVELOPMENT

Dr. E. Hari Prasad Sharma

Associate Professor, Dept. of Business Management
Vaageswari College of Engineering - Karimnagar

Introduction

The development of management education can be traced back to 18th century. Since 18th century, there are tremendous changes are found in management education. In India, though, management education was derived from the western management thought and practice, Indian management scholars and practitioners are drawing some extrapolations from epics like, Maha Bharatha, Ramayana, Bhagavad Geetha and other Puranas and Shastras. Management education was evaluated with emerging trends in industrial engineering and closely related with the disciplines like psychology, philosophy, sociology, economics, accounting, statistics and mathematics. In India, management education is seen as special and superior discipline. Students select management education not because for sake but for exposure, experience to create something innovative which useful to the society and motivated by the consequences associated with management education.

In India, the government announced its New Industrial Policy in 1991 with the process of

Liberalization, Privatization and Globalization (LPG). These reforms in the economy led to replace the traditional approach of education to more efficient professional education and introduced advance courses in education to bond with the industry requirement which have more economic value in present time. Management education got a special recognition with the changing of time. Along with the traditional courses like financial management, marketing management and human resource management, new functional areas like Operations Management, Supply Chain Management, Rural Management, International Business Management, Digital Marketing, Data Analytics, Financial Analytics and HR Analytics are also covered in management education to meet the industry demand for highly efficient management people. As a result of this, management education became one of the most trending courses which provide a good career to the youth. With this, in India, private edupreneurs are entering in management education and investing an enormous amount of funds by establishing business schools.

I. Introduction

Internet-of-Things (IoT) has emerge as very attractive inside the contemporary wi-fi communications context. The improvement in embedded system has proved to a reliable answer in monitoring and controlling the surroundings monitoring machine. The task goals at constructing a machine which can be used on universally at any scale to screen the parameters in a given environment. With the evolution of miniaturized sensor devices coupled with wi-fi technologies its miles feasible to monitor variables like parameters such as temperature, Gas (co2) in air and lots of greater. Sign in to Continue Reading with gasoline sensors will provide powerful approach for data collection and manage and use of vital gadgets in ACM3. This will be the use of raspberry pi as our fundamental board and sensors will acquire all the real time data from sensors and use the actual core information will be fetched on web of the web.
