from 9.30 AM to 4.30 PM

**** Registrations are accepted before 18th September 2022**

INTERNET OF THINGS:

The **Internet of things (IoT)** is a term for the growing number of electronics that aren't traditional computing devices, but are connected to the internet to send data, receive instructions or both. The Internet of Things is transforming our physical world into a complex and dynamic system of connected devices on an unprecedented scale. The IoT brings the power of the internet, data processing and analytics to the real world of physical objects. For consumers, this means interacting with the global information network without the intermediary of a keyboard and screen; many of their everyday objects and appliances can take instructions from that network with minimal human intervention.

PROGRAMME OUTCOME:

- ❖ Current scenario/job opportunities of Internet of Things.
- ❖ Understanding the skill set required in a new employee in the Internet of Things.
- ❖ Understanding the future and scope available in the industry & their use.
- ❖ In-depth knowledge of design, construction, and programming concepts involved in building an autonomous system. Learn & Interact with renowned Industry Experts.
