Write the equipment for manufacturing of pellets.

These are two variations of equipments used for pellets for extrusion and spheronization.

Extruders :-

The equipments used for conversion of wet mass of drug to uniform rod-shaped particles are known as extruders.

The extruders generate sufficient amount of pressure on wet mass to force through the dies to form an extrudates.

→ The extruders can also be referred as pump as it is capable of developing pressure.

Types of extruders :-

1) Screw-Feed extruder

Principle :- It involves either one (single) or two (twin) auger like screws to generate required pressure to force the wet mass through the die and form extrudates.

Construction :-

→ It consists of 4 zones i.e. feed zone, transport zone, compression zone and extrusion zone.

(Affiliated to JNTUH, Hyderabad)

(Approved by P.C.I., New Delhi & Recognised by the Govt. of Telangana)

- Feed zone is first part which receive the food.
Material then passes to transport zone where screws are located screws aid passage towards compression zone
- Screw feed is of 3 types
- 1) Axial plate
 - 2) dome shaped and radial
- 2) Gravity / Roll Extruders
- In this class of extruders the material is gravity fed into two (and) hollow / solid rollers like gears that exert pressure on wet mass to form extruders
- It contains dies that are drilled as holes into hollow bore between the gear teeth when one gets rotates each tooth mouse into hollow disk
